Protecting Your Home with Total Security

Medical Alarms

Medical alarms are available for those seeking assistance as needed, allowing loved ones to get help when needed while living in the familiar surroundings of their own home. With a monitored medical alarm system, help is just a push of a button away, you can have peace of mind for your family and yourself.

Driveway Alarms

Do you like to know when someone comes up your driveway? We have several options to choose from. With hard wired or wireless, motion detectors or vehicle detectors, we can meet your needs.

Burglary/Theft

Protect your family and your investment while you are at home or away. We offer user friendly security systems at a reasonable price. Either monitored or non-monitored to suit your needs.

Fire & Smoke Alarms

Commercial & Residential options are available. Hard wired & wireless devices are available to meet your specific needs.

Environmental Monitoring

Our systems can monitor your home, lake cottage, business or other facility for specific temperature to confirm the desired temperature is maintained. Water sensing and water shutoffs are also available when a temperature or water alarm occurs.

Power Supply/Failure

The alarm system monitors the incoming power to your facility or home. It is capable of notifying when a power failure occurs.

Sump Pump

Water level monitoring of the sump pump is quick and easy with our alarm system.

Camera Surveillance

Surveillance video is becoming more popular when used in conjunction with a burglar alarm or access control system. Can also be very effective as a loss prevention and management tool.

Security Systems

Q & A

Q. What should I protect for a “basic system”?

A. First you should always protect the doors, as most break-ins are through a door. (85 to 90%) Install some kind of interior trap such as a motion sensor, stress sensor (in the floor) or contacts on some inside doors. For protection when in the home, protect any window that may be accessible at ground level. A glass break detector for sliding doors is also a good idea.

Q. I would like to have a security system but what type of equipment do I need?

A. Here are some questions to consider:

1. Do you want protection while you are in your home, when you're not at home or both?
2. Do you have pets in your home?
3. Do you leave your home unattended for any length of time during the year?
4. Is there a room that contains a high-value item or items?

The answers to these basic questions will determine what type of system is needed.

Q. Why would I want my system monitored by a central station?

A. The newer security systems do a lot more than watch the door, windows or motion in the home. They let you know if the power goes off or the condition of the backup battery. A special disarm code can be used to disarm the system which can dispatch the police silently. It can monitor the home's temperature or sump pump. The keypad has special keys which can send a message to request police, fire department, or ambulance. When smoke detectors are connected to the system it will alert the fire department when smoke is present. The system can also monitor for a medical emergency when connected to a wireless receiver.

Other Services available from Cottage Watchman and E.F. Rhoades & Sons, Inc.
