

DAKOTA ALERT

Wireless Alarms & Security Equipment

Wireless Driveway Alarms

Inside:

Wireless Motion Alert 3000	2
Wireless Probe Alert	3
Wireless Rubber Hose Alert	4
Hard-Wired Vehicle Sensor	5
MURS Alert	6
MURS Alert Transmitter (MAT)	7
MURS 538-BS Base Station	8
MURS 538-HT Hand Held	9
MURS Kits	9
MURS Alert Probe Sensor	10
Driveway Alert Accessories	11
Other Wireless Alert Products	12
Wireless Dial Alert Products	13
Cable Alarm	14
Order Form	15

New 3000 Series features:

- 3,000 foot maximum range*
- Easy installation
- Volume control
- 4 zone monitoring
- 4 form "C" relay outputs
- 4 doorbell tones
- 12-volt DC output
- Battery operated transmitters
- 1 year warranty

*Actual range will vary depending on the local terrain.

Wireless Motion Alert 3000

WMA-3000 • 3,000' range*

Includes one transmitter and one receiver

The WMA-3000 is the next step in the evolution of the driveway alarm. We have taken our years of experience and created the ultimate in wireless systems. The transmitter operates on one 9-volt battery and is easily mounted on a tree or post near the drive. The transmitter uses a passive infrared (PIR) beam to detect people or vehicles to a distance of up to 80 feet, then sends a radio signal back to the WR-3000 receiver *up to 3,000 feet away**.

The transmitter is weather proof and meant for exterior locations. Up to four zones can be monitored with additional transmitters. The transmitters can be programmed so they will each sound a different tone at the receiver.

The WR-3000 is the receiver for the WMA-3000 system. The WR-3000 plugs into a standard wall outlet and can be placed on a table or mounted on the wall. When the receiver gets a signal from the transmitter, one of four different tones (Classical, Westminster Chime, Ding Dong, or Whistle) will sound for a few seconds. There is also a volume control, allowing you to set the sound to the desired level.

The WR-3000 is equipped with four form "C" relays (one for each zone), and one 12-volt DC output terminal that will activate for several seconds when a signal is received. The receiver can be user-programmed, so the 12-volt DC terminal and one relay will activate for 10 minutes, if this is desired. The tones will still sound for several seconds.

Operating Range: -30F to 120F

*Actual range will vary depending on the local terrain.

Note: Our 3000 Series products use the latest technology. Therefore, they are not compatible with our earlier products.

Wireless Probe Drive Alert

WPA-3000 • 3,000' range*

Includes one transmitter and one receiver

The WPA-3000 is an extremely reliable driveway alarm that is used to detect vehicles only. The transmitter operates on one 9-volt battery and has 50' of direct burial wire connecting the probe to the exterior case. The probe is buried parallel to the driveway, and will detect vehicles passing by within approximately 10-12 feet. The direct burial cable can be run to a tree or post nearby, where the transmitter box is located. When a vehicle drives by, the transmitter will send a signal to the WPA-3000 receiver *up to 3,000 feet away**.

The WPA-3000 is ideal in locations where there may be deer or other large animals that would cause false signals with a motion detecting system. Also, because the probe is buried underground, it will be the least noticeable of our wireless systems. The transmitter is weatherproof and meant for exterior locations. Up to four zones can be monitored with additional transmitters. The transmitters can be programmed so they will each sound a different tone at the receiver.

The WR-3000 is the receiver for the WPA-3000 system. See opposite page.

Operating Range: -30F to 120F

*Actual range will vary depending on the local terrain.

Note: Our 3000 Series products use the latest technology. Therefore, they are not compatible with our earlier products.

.....

Extra Transmitter for WPA-3000

For use on second drive

Extra Receiver for WPA-3000

The receivers can be placed in other buildings or locations, and will each sound at the same time.
