

HOW TO RECOVER VIDEO FROM DW SPECTRUM

Updated 10/31/23

To recover video from DW Spectrum:

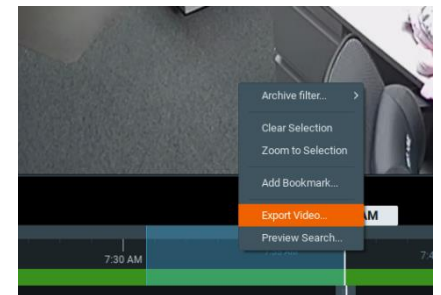

1. Find the video which you want to recover by navigating the timeline bar (bottom of screen).

2. Starting just before the beginning of the clip you want to save, Click and hold the green timeline button, then drag the cursor to the end point of the clip, and release the button. The clip to be saved should now be highlighted blue (see image to right).

NOTE: It is recommended to export, at most, one hour videos at a time for optimal playback.

3. Right-click anywhere on the highlighted blue and select Export Video.

4. On The Export Video window, select where you want the video saved by clicking Browse...
5. Select the name and file type for the file.

IT IS RECOMMENDED TO:

- a. Leave the file name at the default.
- b. Change the file extension to "MPEG-4 Part 14 (*.mp4)".

6. Click Export at bottom right, and you are done.
